[Causes of climate change - Canada.ca](#)

Climate change can involve both changes in average conditions and changes in variability, including, for example, extreme events. The earth's climate is naturally variable on all time scales. However, its long-term state and average temperature are regulated by the balance between incoming and outgoing energy, which determines the Earth's energy balance.

[Climate Change and Impact - The Cyprus Institute](#)

Climate Change and Impact The Given the ongoing decrease in rainfall observed for the last three decades,

climate change in Cyprus will result in additional reductions of rainfall of 10-15% over the 2020 to 2050 period. Thus the need for both increasing drinking water and more abundant water for irrigation will result in a growing demand for additional seawater desalination plants and an

[What is Climate Change? What Causes Global Warming?](#)

Climate change, also called global warming, refers to the rise in average surface temperatures on Earth. An overwhelming scientific consensus maintains that climate change is due primarily to the human use of fossil fuels, which releases carbon dioxide and other greenhouse gases into the air.
