FATHMM - OMICtools

Predicts functional consequences of non-synonymous single nucleotide polymorphisms (nsSNP). FATHMM is built on a sequence-based method that associates evolutionary conservation in homologous sequences with disease-specific weights. This software can characterize mutations related to a specific disease, or a group of related diseases (disease-specific), and other putative disease-causing (non-specific) mutations.

Markov Processes - Mathematics Department People Pages

Markov Processes 1. Introduction Before we give the definition of a Markov process, we will look at an example: Example 1: Suppose that the bus ridership in a city is studied.
