Abstract: I will give an introduction to vector-valued modular forms and describe my research on the arithmetic of vector-valued modular forms with respect to a representation of $\Gamma_0(2)$. The collection of vector-valued modular forms form a graded module over the graded ring of modular forms. I will explain how understanding the structure of this module allows one to show that the component

Analysis on arithmetic schemes. II | Journal of K-Theory ...

We construct adelic objects for rank two integral structures on arithmetic surfaces and develop measure and integration theory, as well as elements of harmonic analysis. Using the topological Milnor K_2 -adelic and K_1/K_1 -adelic objects associated to an arithmetic surface, an adelic zeta integral is defined.

Homotopy Theory and Arithmetic Geometry: Motivic and ...

The focus of this research school is on three major advances that have emerged lately in the interface between homotopy theory and arithmetic: cohomological methods in intersection theory, with emphasis on motivic sheaves; homotopical obstruction theory for rational points and zero cycles; and arithmetic curve counts using motivic homotopy theory.
