Conformal Lie algebras via deformation theory
 problem of kinematical Lie algebras is the classification of conformal Lie algebras, but one first has to decide what a conformal Lie algebra is. Just like not all kinematical Lie algebras act by isometries on a pseudo-riemannian spacetime, we do not ex-

An introduction to Leibniz algebra cohomology/lecture 1 ...

The plan is to give an introduction to Lie algebra cohomology that can be followed on different levels. The development of the cohomological theory will require nothing beyond the basic rules for Lie algebras and representations. To make things more interesting, the theory is developed for Leibniz

Leibniz algebras 1 arXiv:math/0611642v1 [math.RA] 21 Nov 2006

A characteristic of non-Lie Leibniz algebras is a nontriviality of the ideal generated by squares of the elements of the algebra (moreover, it is abelian). Cartan subalgebras, their relations with regular elements and decomposi-

Lie algebras and representations of continuous groups Lie Algebras and Representations of Continuous Groups D. E. LITTLEWOOD University College of North Wales, Bangor Received: 13 November 1974 Abstract It is shown that every finitely generated continuous group has a subgroup generated by its infinitesimal transformations. This subgroup has a group algebra which is the Lie algebra of the group. By obtaining complete systems in the Lie algebra and

Generalization of Cartan subalgebras to arbitrary Lie algebras. Examples 6 and 9 show that the class of NCSAs is too large in the context of both root reductive d BKM Lie algebras and that nilpotent NCSAs is not adequate in the larger context of locally reductive Lie algebras. Thus the definition of a Cartan subalgebra in an arbitrary context proposed in [BP] does not seem to be adequate in these
