[Nucleic Acids - Function, Examples, and Monomers](#)
Nucleic acids are molecules that allow organisms to transfer genetic information from one generation to the next. These macromolecules store the genetic information that determines traits and makes protein synthesis possible. [Nucleic Acid Nanotechnology | Science](#)

Nucleic acids are best known as the carriers of genetic information, but they are also a versatile material for designing nanometer-scale structures, because nucleic acid sequences can be designed such that the strands fold into well-defined secondary structures.

[Nucleic acid - Wikipedia](#)

Nucleic acids are the biopolymers, or small biomolecules, essential to all known forms of life. The term nucleic acid is the overall name for DNA and RNA.

[Nucleic acid | chemical compound | Britannica.com](#)

Nucleic acid: Nucleic acid, naturally occurring chemical compound that is capable of being broken down to yield phosphoric acid, sugars, and a mixture of organic bases (purines and pyrimidines). Nucleic acids are the main information-carrying molecules of the cell, and, by directing the process of protein

[Nucleic Acid: Definition, Function, Polymer, Monomer ...](#)

Nucleic acid is the chemical name for the molecules RNA and DNA. The name comes from the fact that these molecules are acids that is, they are good at donating protons and accepting electron pairs in chemical reactions and the fact that they were first discovered in the nuclei of our cells.

[Nucleic acid | Define Nucleic acid at Dictionary.com](#)

Nucleic acids consist of either one or two long chains of repeating units called nucleotides, which consist of a nitrogen base (a purine or pyrimidine) attached to a sugar phosphate. The two main nucleic acids are DNA and RNA.

[Nucleic acids \(article\) | Khan Academy](#)

Nucleic acids, and DNA in particular, are key macromolecules for the continuity of life. DNA bears the hereditary information that's passed on from parents to children, providing instructions for how (and when) to make the many proteins needed to build and maintain functioning cells, tissues, and organisms.
