A. Rizzi et al. (eds.), Numerical Methods for the Computation of Inviscid Transonic Flows with Shock T—erefore this system can be used to compute transonic flows with shock waves under the isentropic approximation. This pseudo-unsteady method for potential flows seems to be new, but similar methods have also been studied by Essers [6]–[7]. For numerical solution, the pseudo-unsteady

A new fast time-dependent method for the computation of inviscid potential or rotational transonic flows is described. The method is significantly faster than the classical time-dependent techniques, and is constructed in order to be especially very efficient at transonic and at low speed flow regimes.
