Radar Basics Physical fundamentals of the radar principle

These principles can basically be implemented in a radar system, and allow the determination of the distance, the direction and the height of the reflecting object. (The effects atmosphere and weather have on the transmitted energy will be discussed later; however, for this discussion on determining range and direction, these effects will be temporarily ignored.)

SLAR (side-looking airborne radar) and did not use the principle of the synthetic aperture. This led to a moderate azimuth resolution which deteriorates as the range increases. For example, an X-band SLAR system with a 3-meter antenna diameter has an azimuth antenna beamwidth of $\theta = 0.003 \text{ m} / 1 \text{ m} = 0.003 \text{ rad}$, a $\text{m} / \lambda = (1)$ where λ is the wavelength. The azimuth resolution $\Delta \alpha$ is given by the

Radar Basics Side Looking Airborne Radar

Side Looking Airborne Radar (SLAR) The platform (aircraft or satellite) of an side-looking airborne radar (SLAR) travels forward in the flight direction with the nadir directly beneath the platform. The microwave beam is transmitted obliquely at right angles to the direction of flight illuminating a swath. Range refers to the across-track dimension perpendicular to the flight direction, while azimuth refers to the along-track dimension parallel to the flight direction.

Radar Basics Radar Principle

Radar Principle. The electronic principle on which radar operates is very similar to the principle of sound-wave reflection. If you shout in the direction of a sound-reflecting object (like a rocky canyon or cave), you will hear an echo.

Radar Basics

It is common that the majority of commercial aircraft nowadays carry an Airborne Weather Radar system that is most often built into the aircraft nose. Airborne Weather Radar provides the pilot with a local (ahead only) weather picture in the cockpit and allows him to identify and avoid specific, undesirable weather formations. A maximum range of 180 Nm is common although the commonly used range (as selected by pilots) would normally be in the 30 to 80 Nm range.
