### Theta function - Wikipedia

The theta function was used by Jacobi to construct (in a form adapted to easy calculation) his elliptic functions as the quotients of the above four theta functions, and could have been used by him to construct Weierstrass's elliptic functions also, since

Our interest in the functions  $(a,q,c(z,j))$  is motivated by the observation that for some special choices of  $A, Q, C$ , vectors  $v, w \in Aq$  and a rational number  $A$  the function  $\exp(7r Ar)9A,Q,c(Tv + w, r)$  is a modular form of weight  $-1$  for some congruence-subgroup of  $SL_2(\mathbb{Z})$ . ### 1 Theta Functions - MIT Mathematics

1 Theta Functions We've previously seen connections between modular forms and Ramanujan's work by verifying that Eisenstein series are indeed modular forms, and showing that the Discriminant function is a weight  $12$  cusp form with a product expansion in  $q$ . As we said then, the extent to which we can express modular forms in terms
